

TECHSHIP INTERNSHIP

Day 1 – Introduction to Web Development

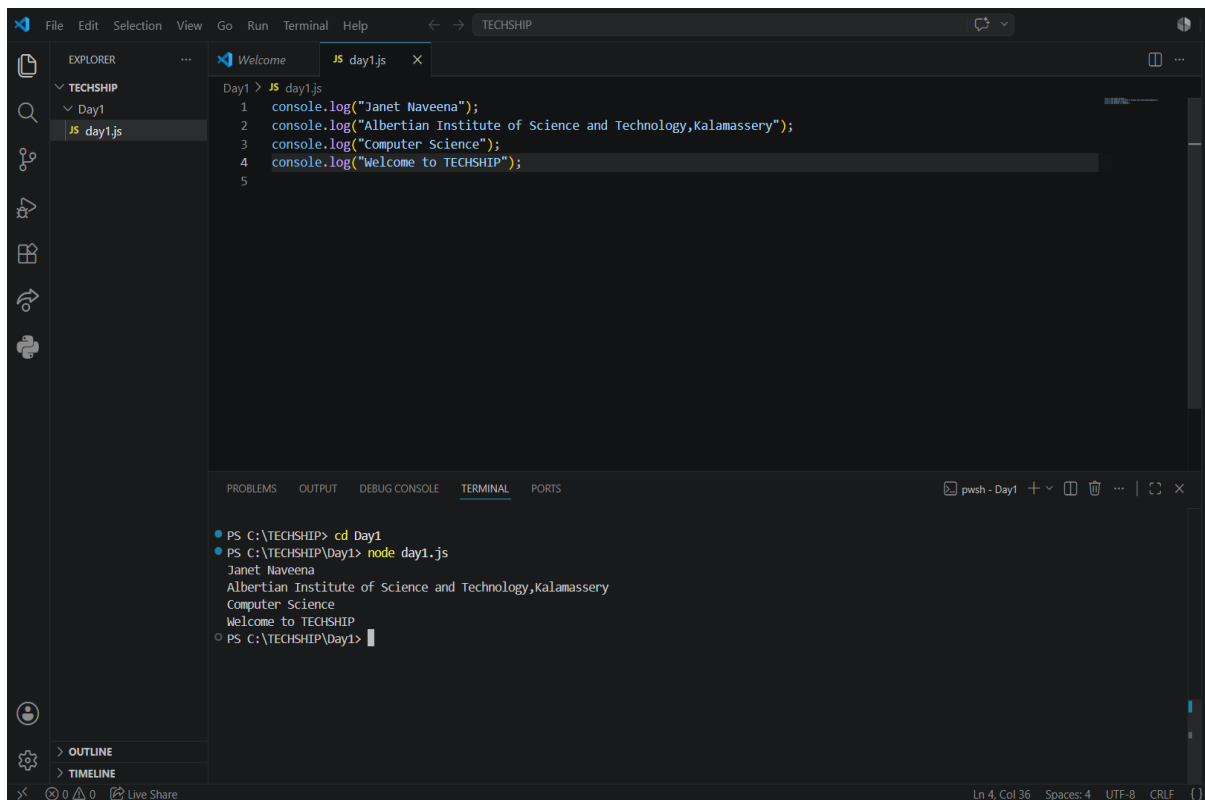

Submitted by : Janet Naveena

Date : 01-06-2026

Today I learned about web development and the basic technologies used to build websites. Web development is the process of creating and maintaining websites. It includes designing web pages, adding features, and making websites work properly for users.

Frontend and backend are two important parts of web development. Frontend is the part that users can see and interact with, such as buttons, images, and forms. It is usually developed using HTML, CSS, and JavaScript. Backend is the part that works behind the scenes. It handles data, databases, authentication, and server-side operations.

JavaScript is an important programming language in web development because it makes websites interactive and dynamic. It can be used to create animations, validate forms, and update content without reloading the page. Today, I also installed the required tools and ran my first JavaScript program successfully.

The screenshot shows the Visual Studio Code interface. The Explorer panel on the left shows a project named 'TECHSHIP' with a subfolder 'Day1' containing a file 'day1.js'. The main editor area displays the content of 'day1.js', which contains four lines of JavaScript code using `console.log` to print a name, an institute name, a subject, and a welcome message. The bottom panel shows the 'TERMINAL' tab with the command prompt output of running `node day1.js`, which matches the console log statements in the code file.

```
File Edit Selection View Go Run Terminal Help
