

TECHSHIP INTERNSHIP

Day 6 – Introduction to Next.js

Submitted by : Janet Naveena

Date : 08-06-2026

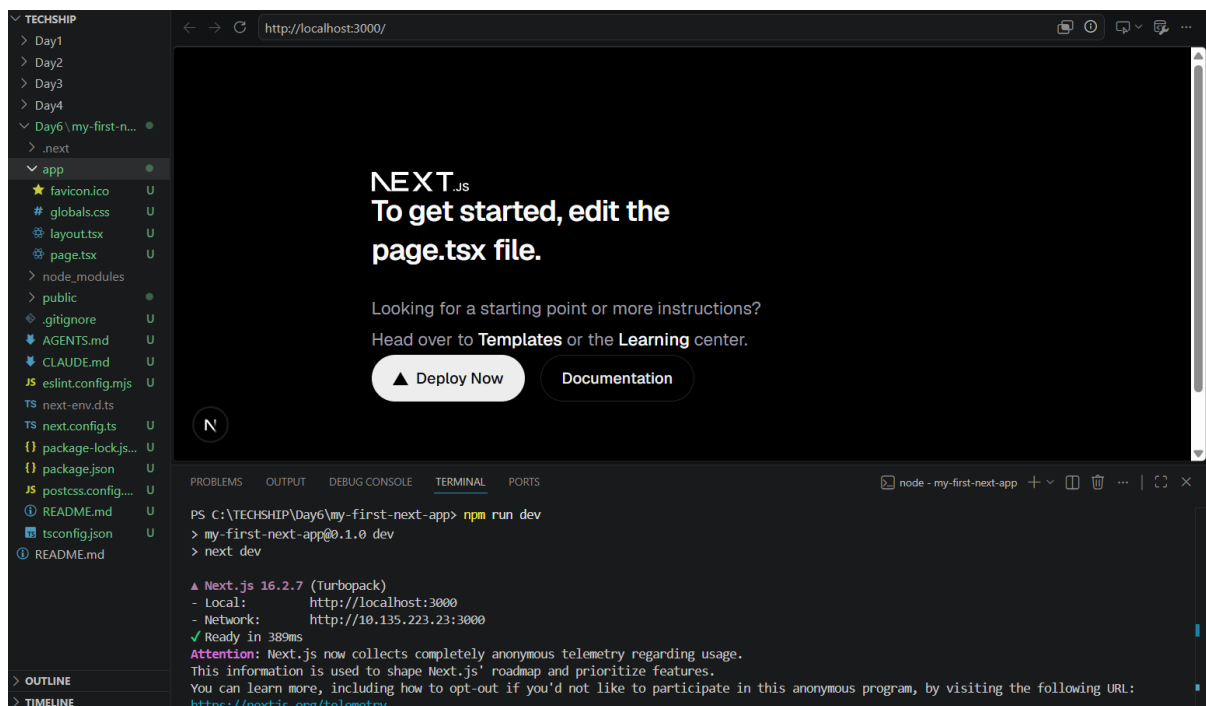

During Day 6 of the TECHSHIP Internship Program, I learned the basics of Next.js and how it is used to build modern web applications. I created a Next.js project, explored its folder structure, and learned how to create multiple pages using file-based routing.

I also learned about reusable components by creating Header and Footer components and using them on different pages. In addition, I learned the basics of React Hooks, especially useState, by creating a counter application and a dynamic welcome message.

Compared to traditional web development, Next.js provides a more organized way of building websites with built-in routing and reusable components. Initially, I found the project structure and React Hooks difficult to understand, but after practicing the activities, I became more comfortable using them.

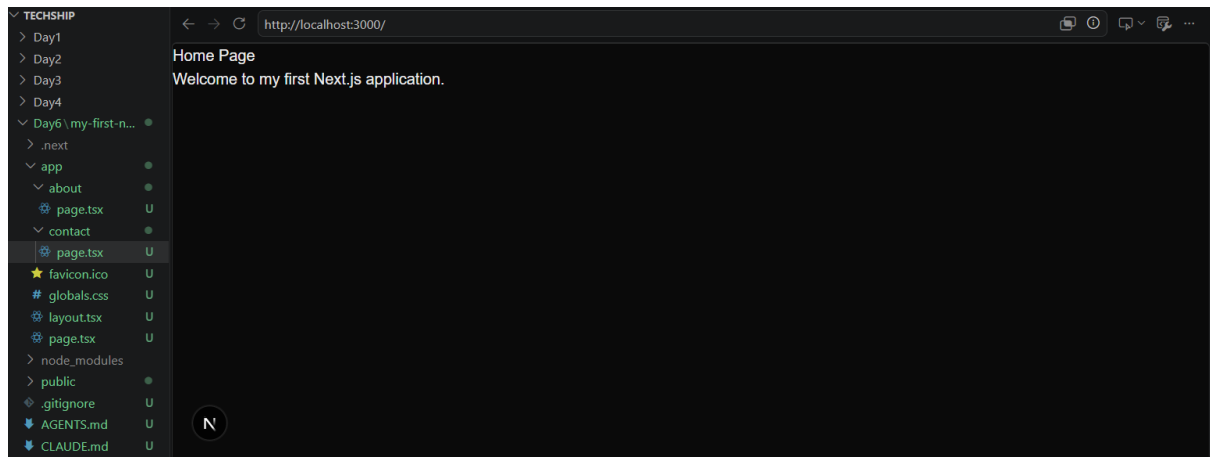

Activities

Activity 1 – Create Your First Next.js Application

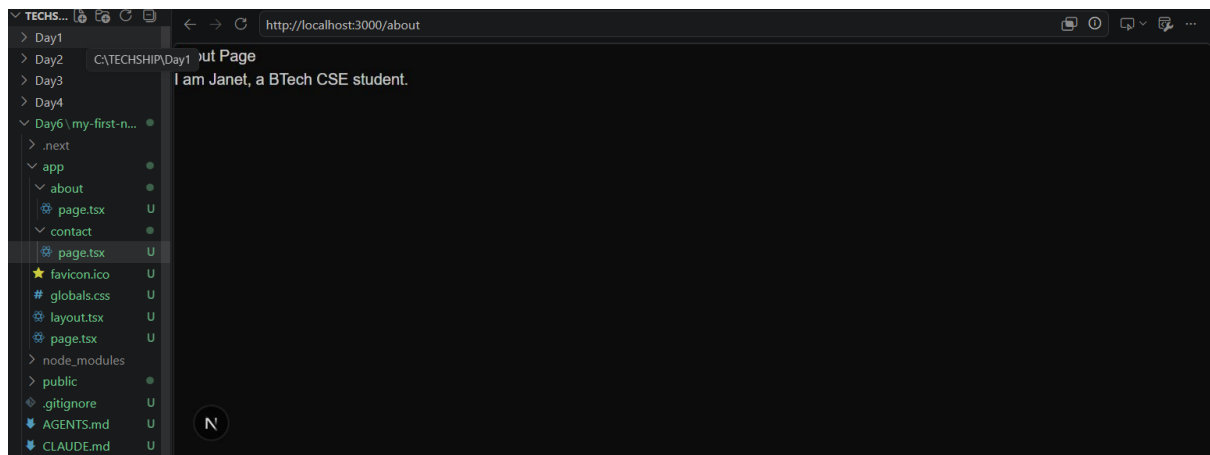

Activity 2 – Create Multiple Pages

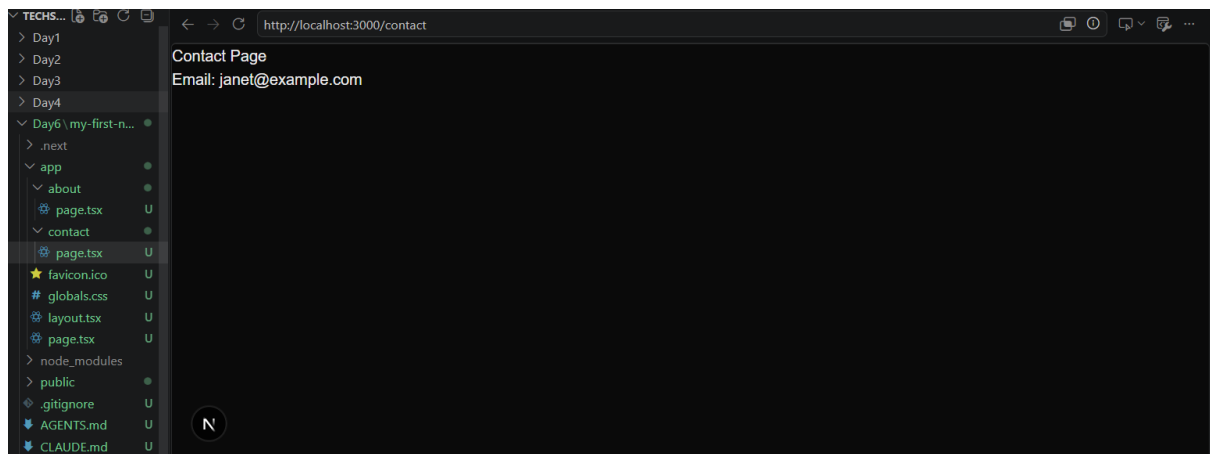

Home page

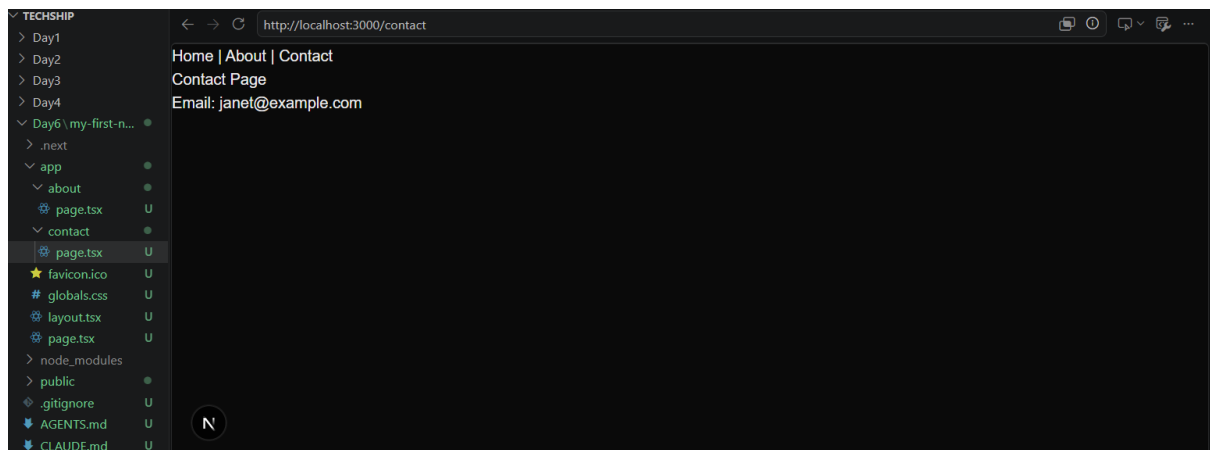

About Page

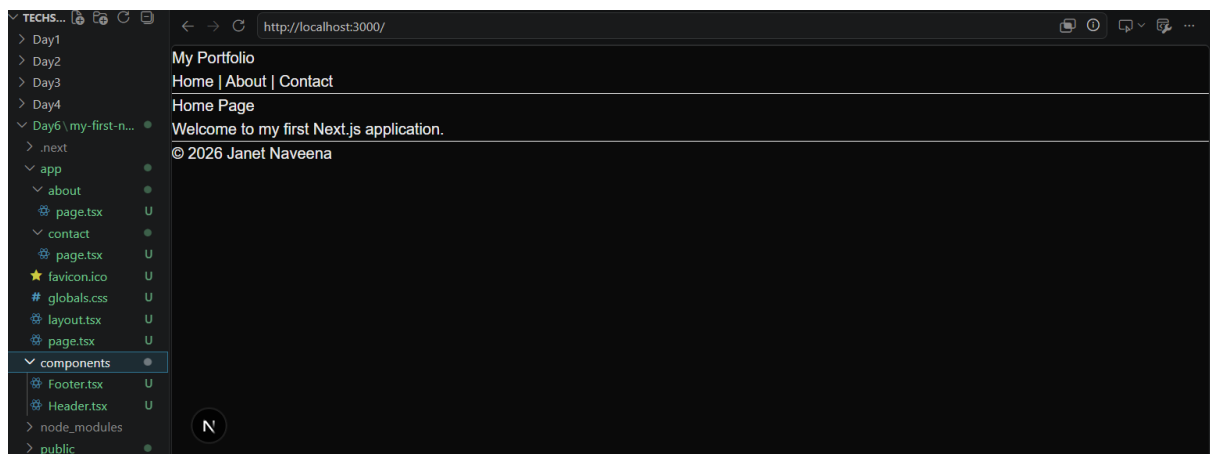

Contact Page

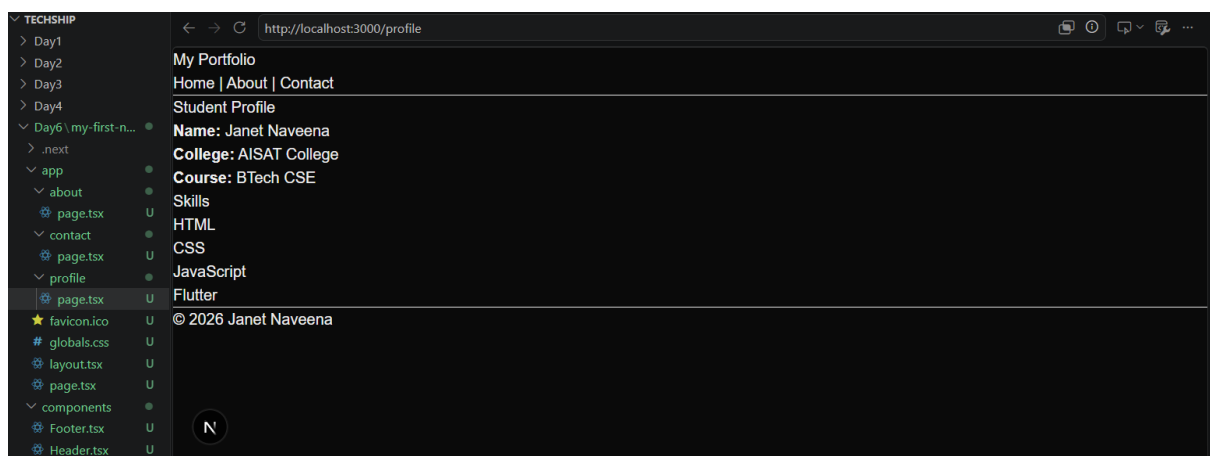

Activity 3 – Navigation Menu

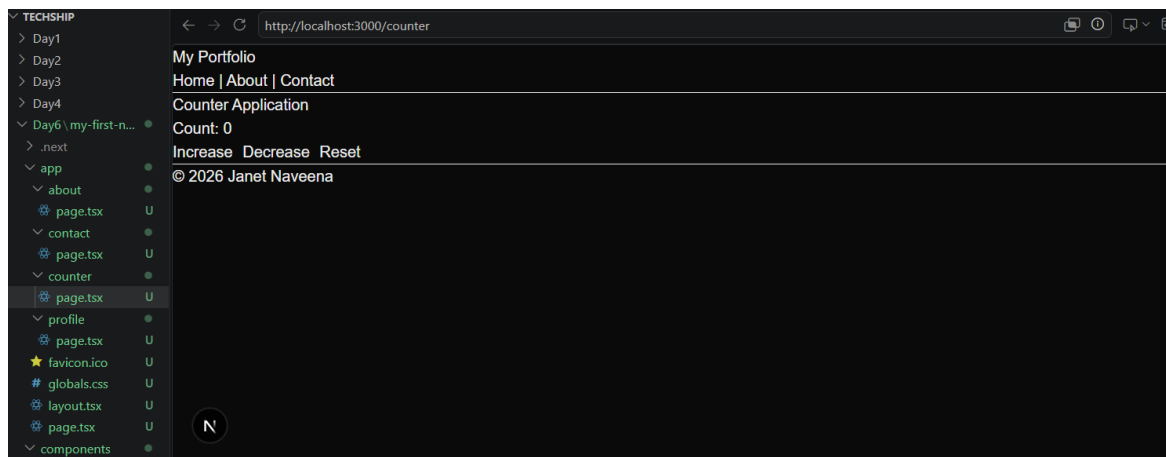

Activity 4 – Create Reusable Components

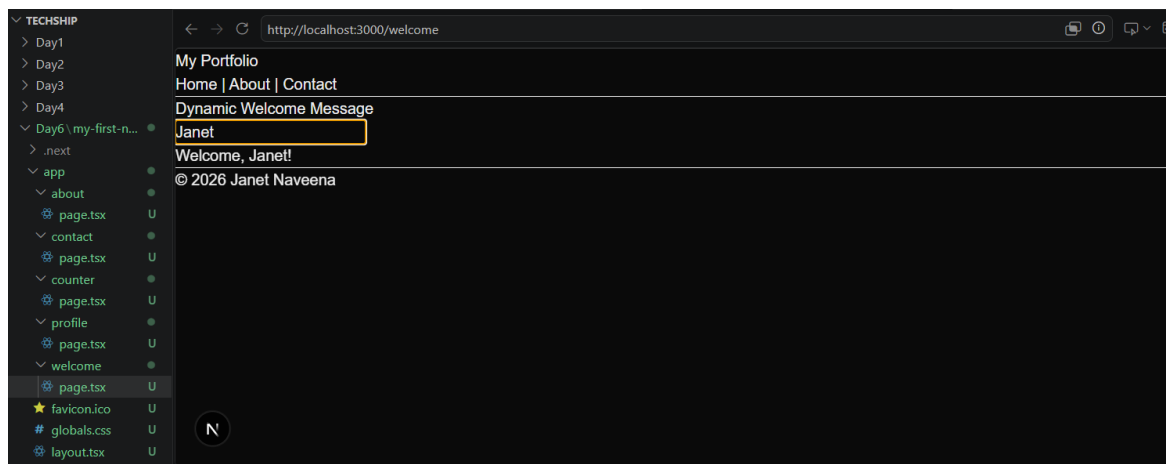

Activity 5 – Student Profile Page

Activity 6 – Counter Application

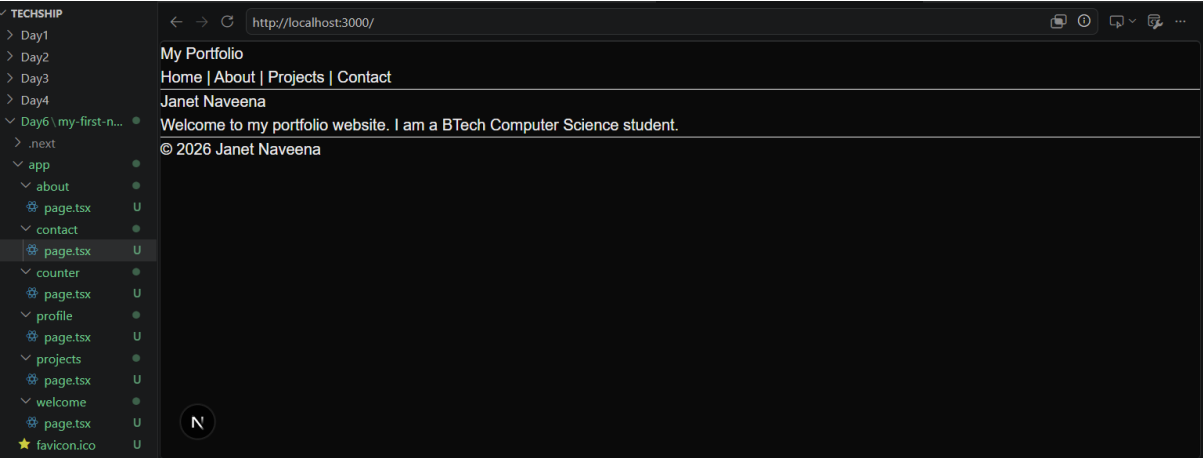

Activity 7 – Dynamic Welcome Message

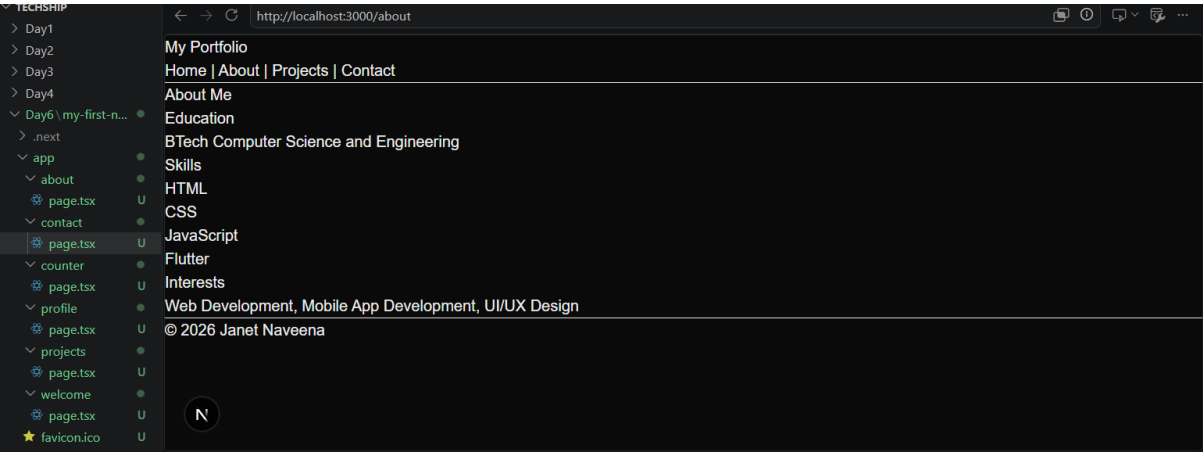

Mini-Project

Personal Portfolio Website (Next.js Version)
